1	Ir	nvertible Matrix Theorem 1
	1.	1 Definition
	1.	2 Exercise
1		Invertible Matrix Theorem
1.	1	Definition
		be a square $n \times n$ matrix. Then the following statements are equivalent is, for a given A, the statements are either all true or all false.
	1.	A is invertible.
	2.	A is row equivalent to I.
	3.	A has n pivot positions.
	4.	The equation $A\mathbf{x} = 0$ has only the trivial solution.
	5.	The columns of A are linearly independent.
	6.	The linear transformation $\mathbf{x} \mapsto A\mathbf{x}$ is one-to-one.
	7.	The equation $A\mathbf{x} = \mathbf{b}$ has at least one solution for each \mathbf{b} in \mathbb{R}^n .

8. The columns of A span \mathbb{R}^n

- 9. The linear transformation $\mathbf{x} \mapsto A\mathbf{x}$ maps \mathbb{R}^n onto \mathbb{R}^n .
- 10. There is an n x n matrix C such that CA = I.
- 11. There is an $n \times n$ matrix D such that AD = I.
- 12. A^T is invertible.
- 13. The columns of A form a basis of \mathbb{R}^n .
- 14. Col A = \mathbb{R}^n .
- 15. dim Col A = n.
- 16. rank A = n
- 17. Nul A = 0
- 18. dim Nul A = 0
- 19. The number 0 is *not* an eigenvalue of A.
- 20. det $A \neq 0$.
- 21. $(\text{Col A})^{\perp} = \mathbf{0}$
- 22. $(\text{Nul A})^{\perp} = \mathbb{R}^n$
- 23. Row $A = \mathbb{R}^n$

1.2 Exercise

Thm 9.1.16 Let $A \in M_n$ and let $\lambda \in \mathbb{C}$. Then the following statements are equivalent:

- (a) λ is an eigenvalue of A.
- (b) $A\mathbf{x} = \lambda \mathbf{x}$ for some nonzero $\mathbf{x} \in \mathbb{C}^n$.
- (c) $(A \lambda I)x = 0$ has a nontrivial solution, that is, nullity $(A \lambda I) > 0$.
- (d) $rank(A \lambda I) < n$.
- (e) A λI is not invertible.

- (f) A^{\top} λI is not invertible.
- (g) λ is an eigenvalue of A^{\top} .

Proof

(a) \Leftrightarrow (b)

By definition 9.1.1, if $A\mathbf{x} = \lambda \mathbf{x}$ and $\mathbf{x} \neq \mathbf{0}$ then (λ, \mathbf{x}) is an eigenpair of A, meaning λ is an eigenvalue of A.

- (b) \Leftrightarrow (c)
- $(c) \Leftrightarrow (d)$
- $(d) \Leftrightarrow (e)$
- $(e) \Leftrightarrow (f)$

By IMT, if A^{\top} is not invertible, then A is not invertible. The same follows for $A - \lambda I$ and $A^{\top} - \lambda I$.

 $(f) \Leftrightarrow (g)$
